

## **Stanford study shows link between vaping and increased risk of COVID-19 among youth and young adults**

Monday, August 17, 2020

According to a new study led by researchers at the Stanford University School of Medicine, vaping is linked to a substantially increased risk of COVID-19 among teenagers and young adults. Among young people who were tested for the virus that causes COVID-19, the research found that those who vaped were five to seven times more likely to be infected than those who did not use e-cigarettes.
